results.

What this report certifies

This report is the completion record of the live validation soak: a fixed observation window during which the automated paper-trading mirror of the production strategy was checked, every day, against the rolling research replay of the same strategy. The soak passes when the window contains a sustained run of clean days with no mismatch between the live mirror and the replay.

It is published from the real soak record. It is not generated, and cannot be generated, until the soak genuinely completes.

Validation window

Field	Value
Window start (UTC)	13 August 2026
Evaluated through (UTC)	26 August 2026
Window length	14 calendar day(s)
Consecutive clean days achieved	14
Consecutive clean days required	14
Days with live coverage	14

Daily consistency check

Each UTC day, the live paper-trading mirror and the rolling research replay are compared on the entries each one took. A single mismatch on any covered day breaks the clean-day run and restarts the count - so the run below represents an unbroken sequence of fully agreeing days.

Result	Value
Confirmed mismatch days in window	0
Longest clean run (days)	14

Full macro block observations (optional)

A day when macro protection blocked all new entries is rare during long orderly-bear stretches and is not required to complete this soak. When such days occur inside the window they are recorded below as additional telemetry. Separate engineered tests already cover that safety path.

Observation	Value
Full-block days observed	0
Full-block day(s) (UTC)	none

Outcome

PASS. Across the validation window the live paper-trading mirror matched the rolling research replay on every covered day for 14 consecutive clean days (requirement: 14), with 0 confirmed mismatch day(s). The clean-day completion condition is satisfied.

How to verify

- The live paper-trading mirror and rolling research replay are the same artifacts published on the performance pages; the daily comparison is automated and alerts operators on any mismatch.
- This report is regenerated from the real soak record at publication time. Every figure above is read from that record, not entered by hand.
- Strategy fingerprint at completion:
a89f5db5cf0cd61c1d4558d92ed6db7c8ddf78d0a092cbdede45ed587a84ffa9.

Report generated 27 August 2026 from the live soak record.
